Challenge: Resource Allocation to Strategic Agents

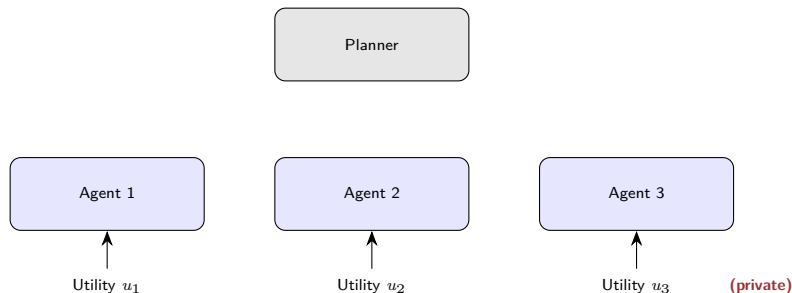

- ① **One central planner** maximize social welfare
- ② **K strategic agents** self-interested (*i.e.*, may lie)
- ③ **1 indivisible item**

Challenge: Resource Allocation to Strategic Agents

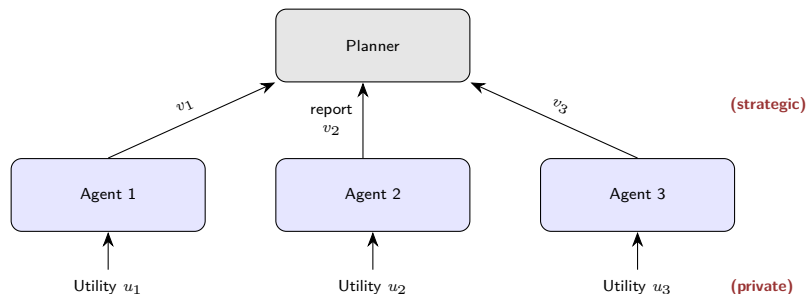

- ❶ **One central planner** maximize social welfare
- ❷ **K strategic agents** self-interested (*i.e.*, may lie)
- ❸ **1 indivisible item**

- ❸ **1 indivisible item**

Challenge: Resource Allocation to Strategic Agents

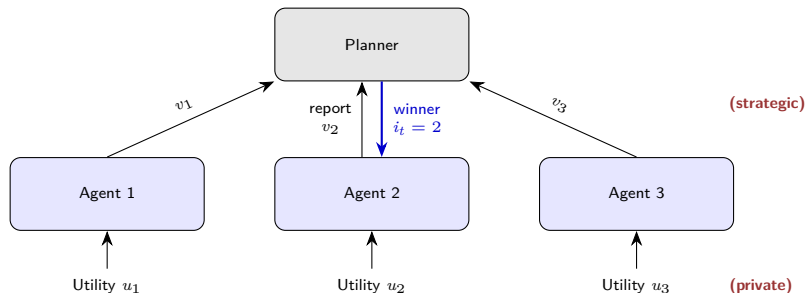

- 1 **One central planner** maximize social welfare
- 2 **K strategic agents** self-interested (*i.e.*, may lie)
- 3 **1 indivisible item**

Challenge: Resource Allocation to Strategic Agents

- 1 **One central planner** maximize social welfare
- 2 **K strategic agents** self-interested (*i.e.*, may lie)
- 3 **1 indivisible item**

Challenge: Resource Allocation to Strategic Agents

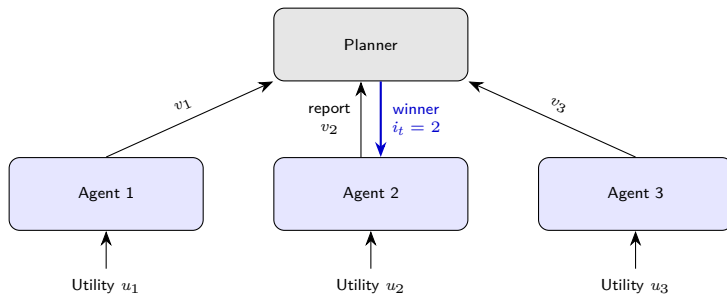

- 1 **One central planner** maximize social welfare
- 2 **K strategic agents** self-interested (*i.e.*, may lie)
- 3 **1 indivisible item**

Two Objectives

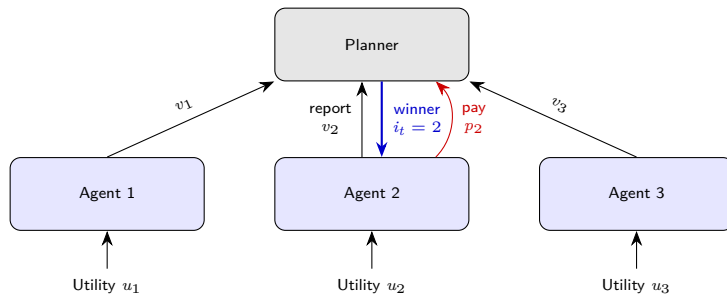

Efficiency. max established utility u_{i_t} (unknown!)

Incentive-Compatibility. truthfully report $v_i \approx u_i$

Classical VCG Mechanisms

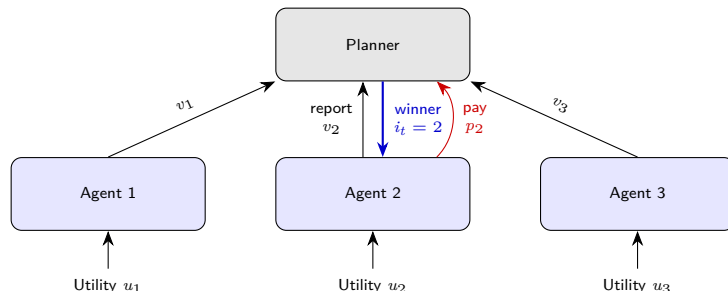

Classical VCG Mechanisms

Monetary mechanisms: VCG family [Vic61; Cla71; Gro73]

Classical VCG Mechanisms

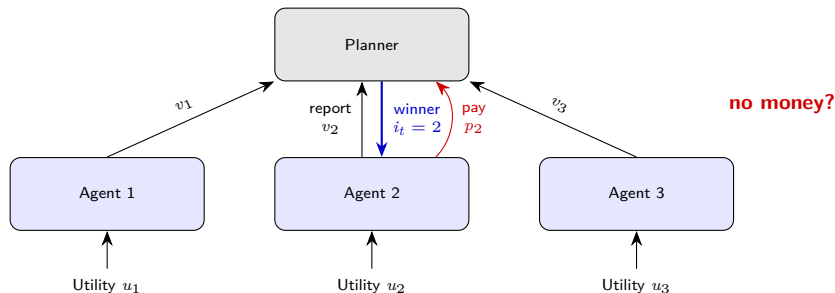

Monetary mechanisms: VCG family [Vic61; Cla71; Gro73]

Money isn't everything!

- 1 Food bank allocations [Pre17; Pre22]
- 2 Healthcare resources [PSÜY24; YBP23]
- 3 GPU in company [ABDVVW22; PSMST22]

Non-Monetary Mechanisms?

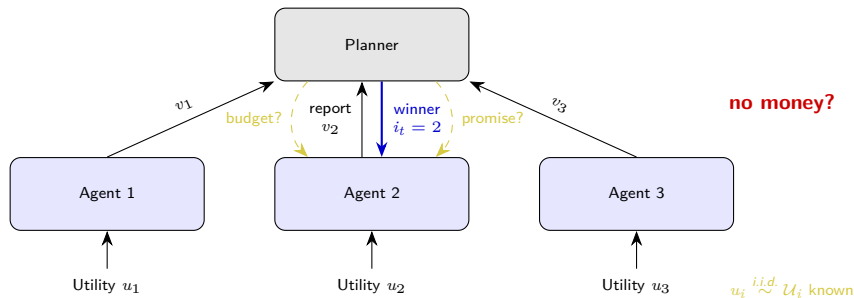

Non-Monetary Mechanisms?

Distribution-Aware approaches [BGS19; GBI21; BJ24]

Non-Monetary Mechanisms?

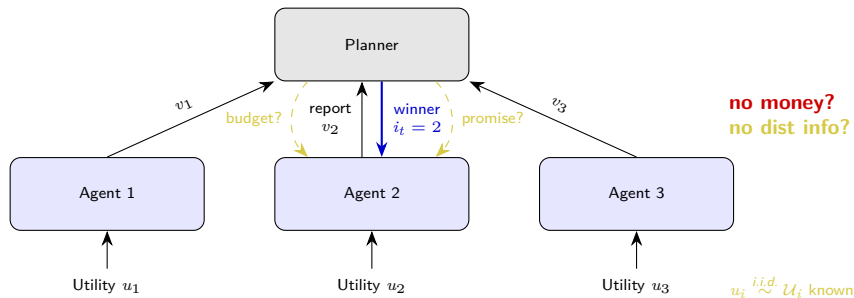

Distribution-Aware approaches [BGS19; GBI21; BJ24]

Distributional info *a-priori* is hard!

- 1 Perfect knowledge on agents
- 2 Enormous historical data

Non-Monetary Mechanisms?

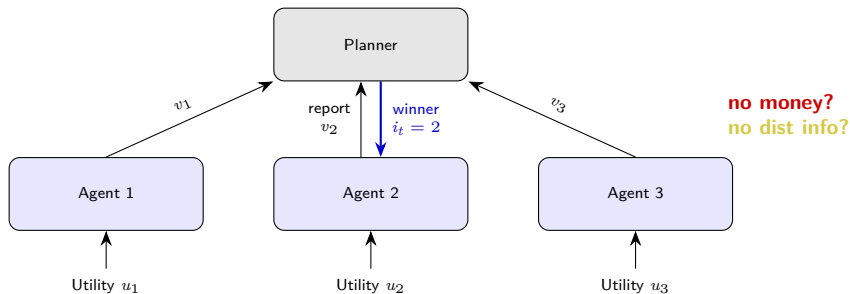

Distribution-Aware approaches [BGS19; GBI21; BJ24]

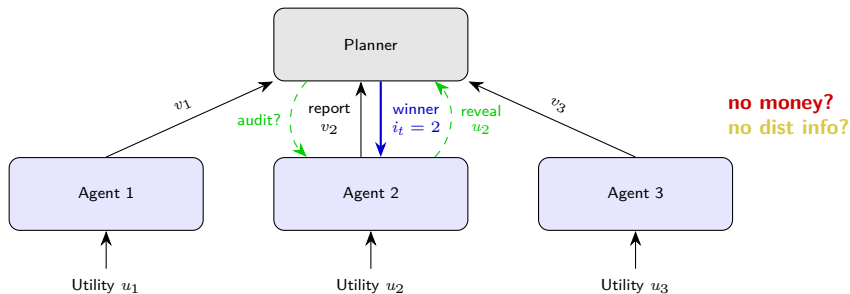

Distributional info *a-priori* is hard!

- 1 Perfect knowledge on agents
- 2 Enormous historical data

Our Prior-Free Mechanism

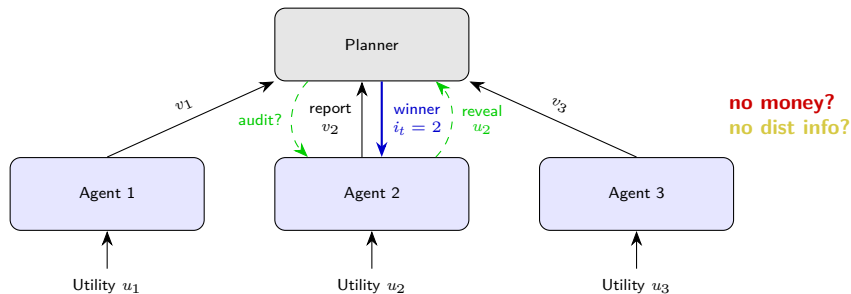

Our Prior-Free Mechanism

Prior-Free mechanism via scarce & powerful “audits”

Our Prior-Free Mechanism

Prior-Free mechanism via scarce & powerful “audits”

Tradeoff between Regret & #Audits

Repeated allocation for T rounds:

❶ **Social Welfare Regret.** $\mathcal{R}_T := \mathbb{E}[\sum_{t=1}^T (\max_i u_{t,i} - u_{t,i_t})]$

Our Prior-Free Mechanism

Prior-Free mechanism via scarce & powerful “audits”

Tradeoff between Regret & #Audits

Repeated allocation for T rounds:

- 1 **Social Welfare Regret.** $\mathcal{R}_T := \mathbb{E}[\sum_{t=1}^T (\max_i u_{t,i} - u_{t,i_t})]$
(Different from Online Learning regret!)

Our Prior-Free Mechanism

Prior-Free mechanism via scarce & powerful “audits”

Tradeoff between Regret & #Audits

Repeated allocation for T rounds:

- 1 **Social Welfare Regret.** $\mathcal{R}_T := \mathbb{E}[\sum_{t=1}^T (\max_i u_{t,i} - u_{t,i_t})]$
(Different from Online Learning regret!)
- 2 **Expected Number of Audits.** $\mathcal{B}_T := \mathbb{E}[\sum_{t=1}^T \mathbb{1}[\text{audit}]]$

Tradeoff between Regret & #Audits

∃ Perfect Bayesian Equilibrium (PBE) π^* , s.t.

Figure: Regret vs $\mathbb{E}[\text{\#audits}]$
green possible; red impossible

Tradeoff between Regret & #Audits

\exists Perfect Bayesian Equilibrium (PBE) π^* , s.t.

Figure: Regret vs $\mathbb{E}[\text{\#audits}]$

green possible; red impossible

**Simple
Mechanism:
UnifAudit.**

$$\mathcal{R}_T \leq \frac{K^2}{p} \text{ \& } \mathcal{B}_T \leq pT.$$

Tradeoff between Regret & #Audits

\exists Perfect Bayesian Equilibrium (PBE) π^* , s.t.

Figure: Regret vs $\mathbb{E}[\text{\#audits}]$

green possible; red impossible

**Main
Mechanism:
AdaAudit.**

$$\mathcal{R}_T \leq K^2 \text{ \& } \mathcal{B}_T = \mathcal{O}(K^3 \log T).$$

Tradeoff between Regret & #Audits

\exists Perfect Bayesian Equilibrium (PBE) π^* , s.t.

Figure: Regret vs $\mathbb{E}[\text{\#audits}]$

green possible; red impossible

Impossible.

$$\mathcal{R}_T = \Omega(K);$$

$$\mathcal{B}_T = \mathcal{O}(1) \implies$$

$$\mathcal{R}_T = \Omega\left(\sqrt{\frac{T}{\log T}}\right).$$

One-Slide Technical Overview

1. **Future Punishment.** Audit reveals $v_{t,i} \neq u_{t,i} \Rightarrow$ never alloc again
2. **Adaptive Audits.**
3. **Learn via Flagging.**
4. **Auxiliary Games.**

One-Slide Technical Overview

1. **Future Punishment.**

Audit reveals $v_{t,i} \neq u_{t,i} \Rightarrow$ never alloc again

2. **Adaptive Audits.**

When i win in round t , audit w.p. $p_{t,i} := 1/V_i^{\text{alive}}$

($V_i^{\text{alive}} := \mathbb{E}_{\text{all agents truthful}} [\sum_{\text{future round}} \text{gain of agent } i]$)

\Rightarrow (almost) always truthful & $\mathcal{B}_T = \tilde{\mathcal{O}}(1)$

(truthful: get $\geq 0 + V_i^{\text{alive}}$; lie: get $\leq 1 + (1 - p_{t,i}) V_i^{\text{alive}}$)

3. **Learn via Flagging.**

4. **Auxiliary Games.**

One-Slide Technical Overview

- Future Punishment.** Audit reveals $v_{t,i} \neq u_{t,i} \Rightarrow$ never alloc again
When i win in round t , audit w.p. $p_{t,i} := 1/V_i^{\text{alive}}$
($V_i^{\text{alive}} := \mathbb{E}_{\text{all agents truthful}}[\sum_{\text{future round}} \text{gain of agent } i]$)
 \Rightarrow (almost) always truthful & $\mathcal{B}_T = \tilde{\mathcal{O}}(1)$
(truthful: get $\geq 0 + V_i^{\text{alive}}$; lie: get $\leq 1 + (1 - p_{t,i}) V_i^{\text{alive}}$)
- Adaptive Audits.** Need to estimate $\mathbb{E}_{\text{all agents truthful}}[\text{gain of agent } i]$
empirically but **can't “condition on”** concentration
(since agents can strategize early; happy to explain offline)
Idea: Let agents “flag” others for biased estimates
(“victims” benefit from truthfully flagging \Rightarrow incentives aligned)
- Learn via Flagging.**
- Auxiliary Games.**

One-Slide Technical Overview

1. Future Punishment.

Audit reveals $v_{t,i} \neq u_{t,i} \Rightarrow$ never alloc again

When i win in round t , audit w.p. $p_{t,i} := 1/V_i^{\text{alive}}$

2. Adaptive Audits.

($V_i^{\text{alive}} := \mathbb{E}_{\text{all agents truthful}}[\sum_{\text{future round}} \text{gain of agent } i]$)

\Rightarrow (almost) always truthful & $\mathcal{B}_T = \tilde{\mathcal{O}}(1)$

(truthful: get $\geq 0 + V_i^{\text{alive}}$; lie: get $\leq 1 + (1 - p_{t,i}) V_i^{\text{alive}}$)

Need to estimate $\mathbb{E}_{\text{all agents truthful}}[\text{gain of agent } i]$ empirically but **can't “condition on”** concentration

3. Learn via Flagging.

(since agents can strategize early; happy to explain offline)

Idea: Let agents “flag” others for biased estimates

(“victims” benefit from truthfully flagging \Rightarrow incentives aligned)

4. Auxiliary Games.

Can't use revelation principle due to unknown / non-unique distributions (happy to explain offline)

How to characterize PBE? Define a “well-behaved” aux game, show aux PBE $\xrightarrow{\text{induce}}$ actual PBE

Main Results & Takeaway

For resource allocation **without money & without dist info...**

Technical Ingredients

- **Future Punishment**
- **Adaptive Audits** ($\mathcal{O}(1)$ regret via $\tilde{\mathcal{O}}(1)$ audits)
- **Learn via Flagging**
("condition on" argument is problematic when strategic)
- **Auxiliary Games**
(revelation principle is inapplicable w/o dist info)

Thank you!
